Project #: 19740.04  
Subject: Albion-Sheridan Township Landfill

Margie - We did not collect water levels in August 1996. We are an oversight contractor for U.S. EPA for the RD/RA and have not performed field work at the site since the Remedial Investigation. I suspect that Woodward Clyde collected the water levels. We collected water levels during the RI and they are summarized on Table 21 of the RI.

The scope of the RI included originally drilling 5 shallow bedrock wells (MW01, MW02, MW03, MW04 and MW05.) The locations were staked in the field with the U.S. EPA RPM and Bob Delaney and Gene Hall of the MDEQ. MW02 was placed in that location because at the time, there was a pig farm directly upgradient of the site. There was a concern that elevated nitrates may be flowing towards the site as a result.

I know that we looked into whether or not the Amberton Village Wells were impacting groundwater flow as part of the RI and were satisfied that they were not. Our RI files have been sent to U.S.EPA but I am trying to find our backup correspondence file.
